

Dear member,

As of the **first quarter of 2026**, Switzerland will no longer accept data from the **2G network** for electronic toll collection.

What does this mean for you?

Your toll devices that still use 2G technology (Arianna 2) will soon stop working, exposing you to possible penalties.

The solution: switch to **K1**, the latest generation satellite device. 4G connectivity included, for hassle-free travel in over 15 countries, including Switzerland.

The advantages of the K1:

1. **Mobile app:** quick setup in just a few steps
2. **Web interface:** control and monitor the status of your fleet's OBUs remotely

Don't wait until the last moment!

Order your K1 today by writing to servizi@colsea.it

Kind regards
